Algorithm suffixTrieMatch(T, P):

Input: Compact suffix trie T for a text X and pattern P

Output: Starting index of a substring of X matching P or an indication that P is not a substring of X

$p \leftarrow P.length()$ { length of suffix of the pattern to be matched }
 $j \leftarrow 0$ { start of suffix of the pattern to be matched }
 $v \leftarrow T.root()$

repeat

$f \leftarrow \mathbf{true}$ { flag indicating that no child was successfully processed }

for each child w of v do

$i \leftarrow start(w)$

if $P[j] = X[i]$ then

{ process child w }

$x \leftarrow end(w) - i + 1$

if $p \leq x$ then

{ suffix is shorter than or of the same length of the node label }

if $P[j..j+p-1] = X[i..i+p-1]$ then

return $i - j$ { match }

else

return "P is not a substring of X"

else

{ suffix is longer than the node label }

if $P[j..j+x-1] = X[i..i+x-1]$ then

$p \leftarrow p - x$ { update suffix length }

$j \leftarrow j + x$ { update suffix start index }

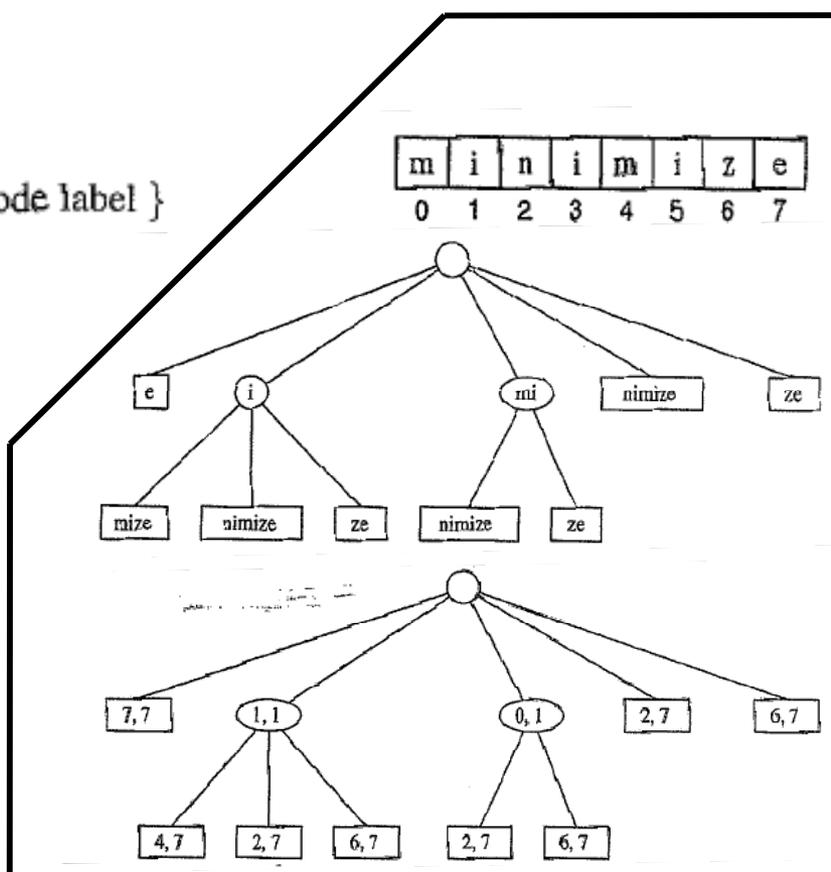

$v \leftarrow w$

$f \leftarrow \mathbf{false}$

break out of the for loop

until f or $T.isExternal(v)$

return "P is not a substring of X"
